My, Art 385, ESP32ToProcessing, 04/16/2020

Assignment

We are supposed to mess around with the Processing sketch that is connected with the ESP32 sketch. We had to create an interactive sketch that was controlled by a button and an LDR/Potentiometer.

Reflections

This assignment was fairly easy to do once I was able to remember the processing syntax. I wanted to do something with photos but I ran out of time since this week has been pretty busy with classwork. Overall. I think I am slowly understanding the concept of connecting the two together. :-)
